

1. Upgraded FatFS from ver. R0.14b to R0.15
2. Bootloader\_uart and Bootloader\_sd: Bootloader functions to read gbl file and parse and reboot.
3. CLI part:
  - a. ls (flag) (dir name)  
-h -l
  - b. Mkdir
  - c. Rm
  - d. Mv
  - e. Cp
  - f. Cd
  - g. pwd
4. Tested Result: Adjusted SDIO frequency too high:no effect, too low: restrict at the said rate  
San disk 1mb read and write: max: 2.77 50Mhz:3.01  
Lexar max: 4.507 50 Mhz 4.507
5. The sd sub-menu has to be entered by typing command "sd"  
Can be used in conjunction with sd sub menu commands ie: "sd ls -h"
